

Measurements of Output Transformers for 300B Single End amplifiers

Unofficial measurements performed at ETF2009
by Jean-Michel Le Cléac'h
aside the shoot-out of OPTs for SE 300B amplifiers

Schematic of the measurement set up

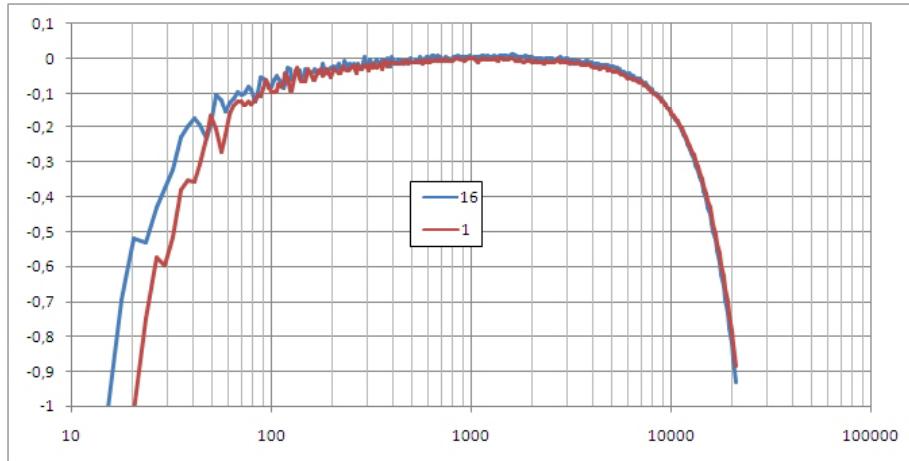

Modified by Jérôme Falampin after a schematic
by William Walther

- All measurements were performed after calibration of the output level at 2volts RMS on 8 ohms at 1000Hz ($P = 0,5$ watt)
- Please note the 1.1dB vertical scale used for the frequency response curves in order to amplify the difference between transformers.
- Due to the unavailability of an oscilloscope the first day of the measurement, several OPTs could not been tested under 10kHz square waves.
- For frequency response and distortion measurement a sound card at $F_s = 96\text{kHz}$ was used. (Pulse response retrieved from logsweep + convolution: Angelo Farina's method.)
- Frequency response spectrums were truncated before the frequency at which the antialiasing low-pass filter of the soundcard begins to operate.
- (please note: coma replacing decimal point in tables)

Transformer N°1 , Højbjerg Karsten , toroidal transformer in cardbox

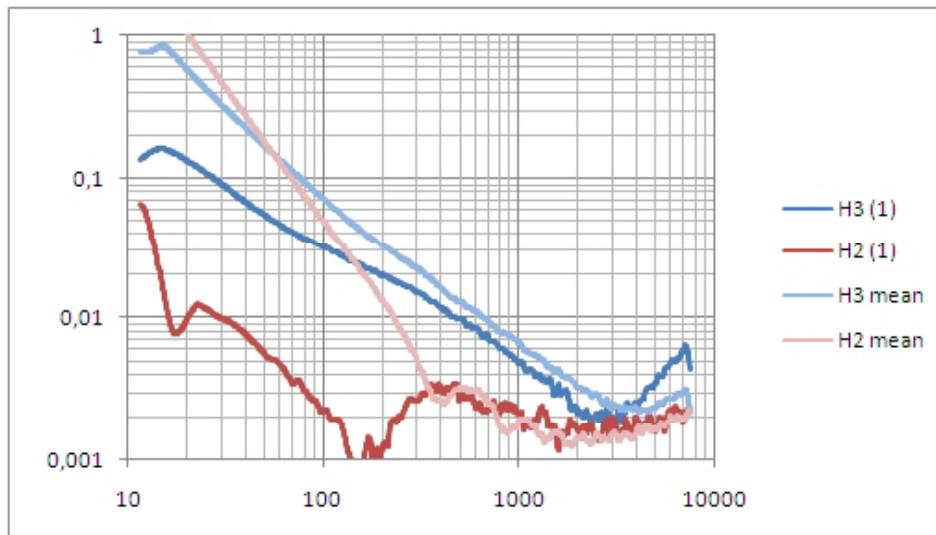

Frequency response (N°1 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
7,8	9,9	8,9	8,7	8,4	9,3	8,8	5,8	0,0	3,8

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

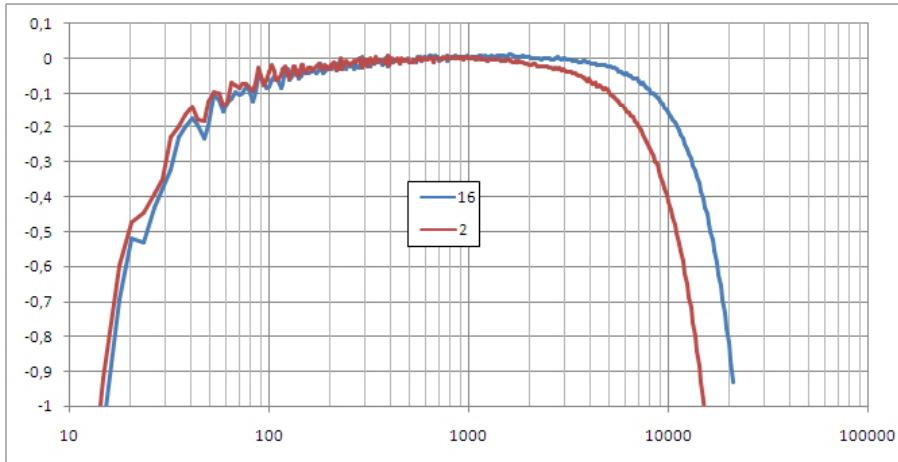

10kHz square wave

Transformer N°2 , Terrell Brian , SE Output transformer

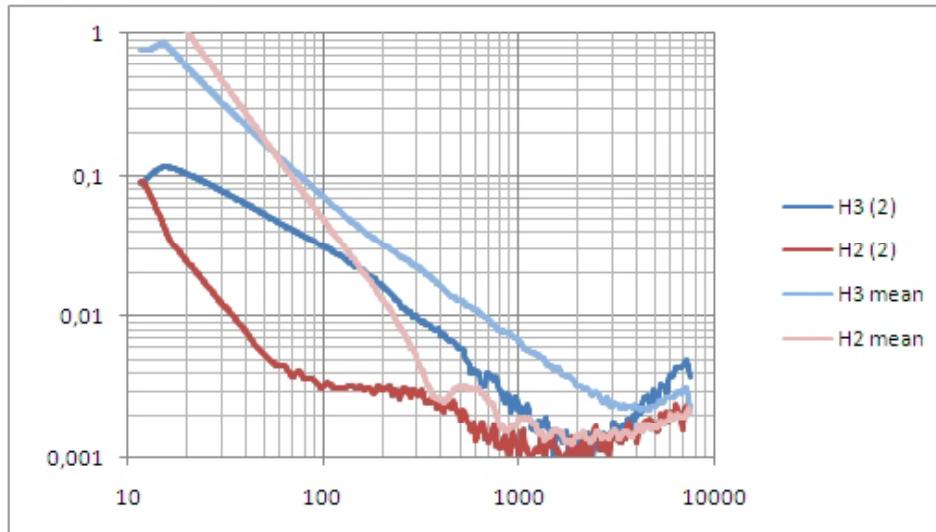

Frequency response (N°2 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
7,6	8,6	9,1	8,2	8,7	8,8	8,7	4,9	6,9	5,6

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

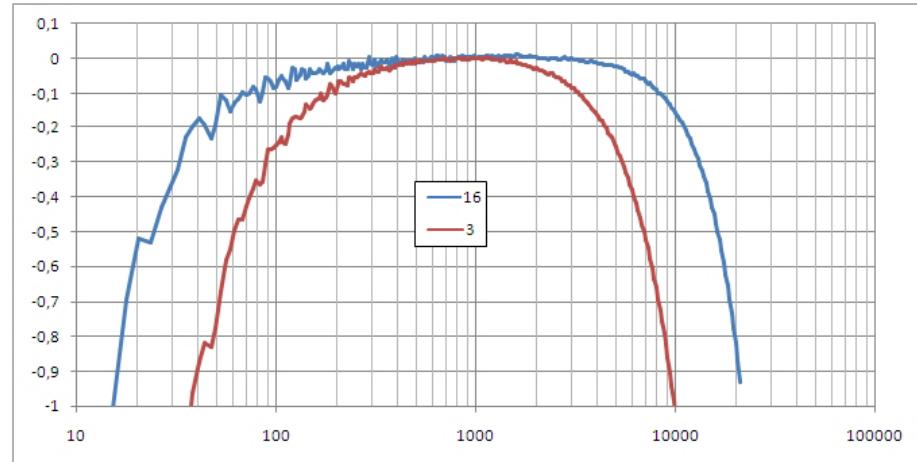

10kHz square wave

Transformer N°3 , Falampin Jérôme , Bouyer ST10 transformer (in soap box)

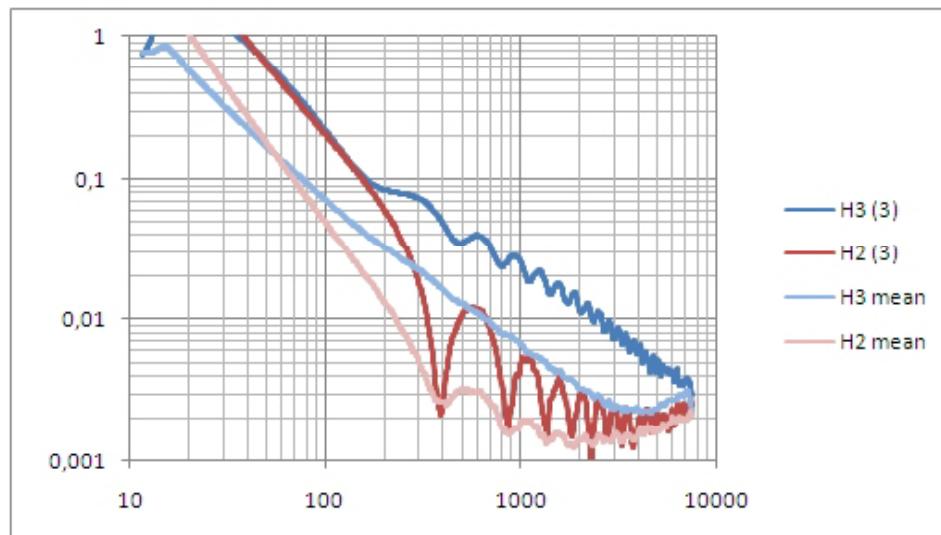

Frequency response (N°3 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

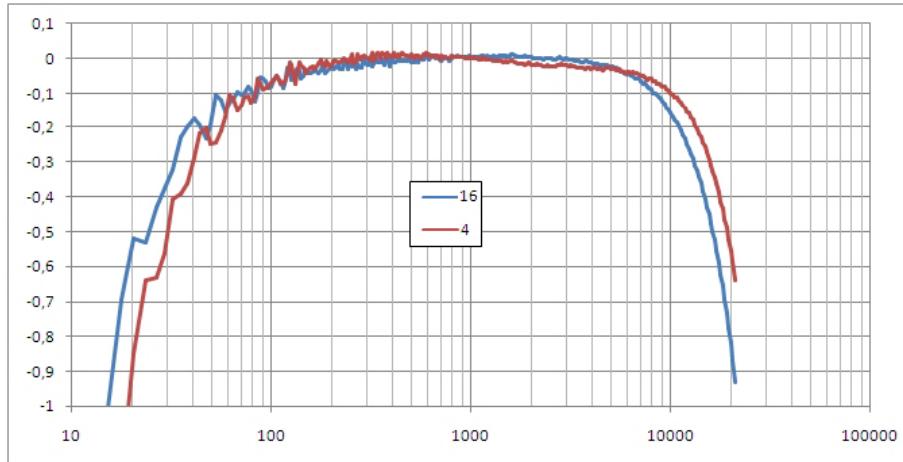

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
0,0	4,7	9,5	3,2	1,8	1,6	1,7			

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°4 , Sullerot Julien , James JH2123

Frequency response (N°4 = red, blue = reference)

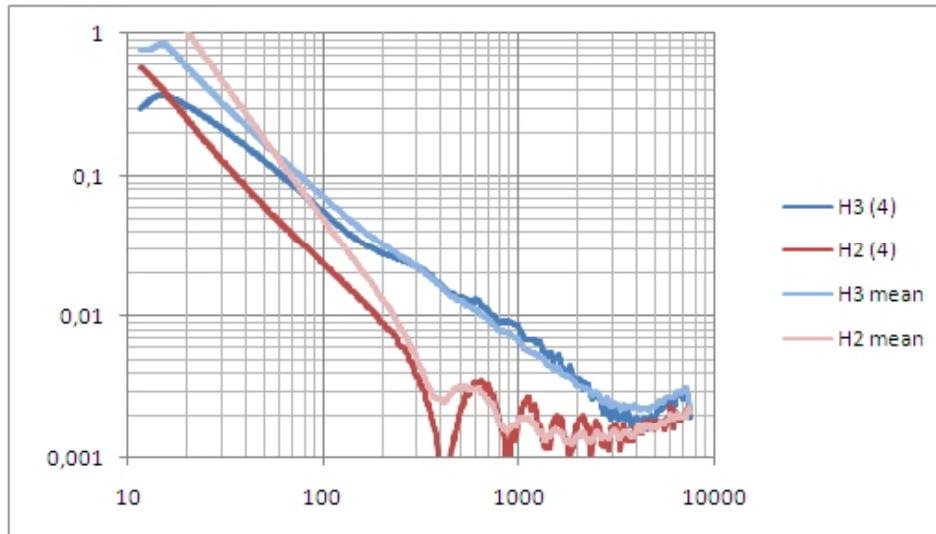

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,3	9,8	8,7	9,3	6,3	5,3	5,9	8,1	6,6	7,6

good frequency response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

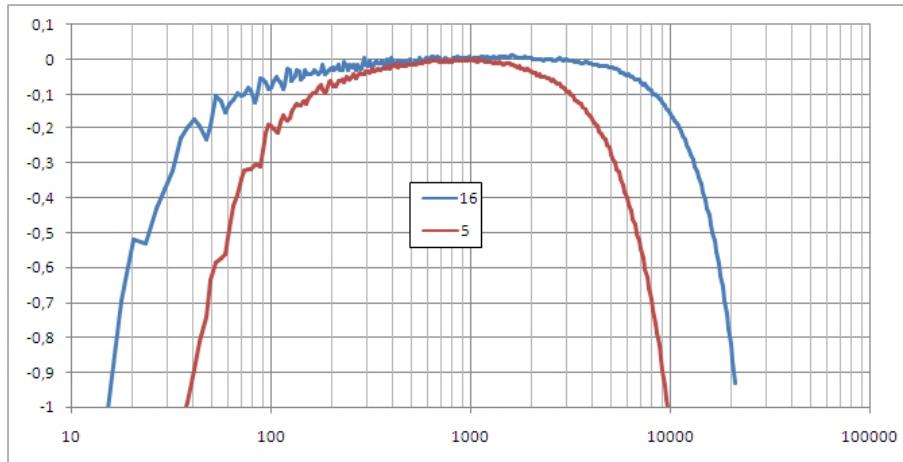

10kHz square wave

Transformer N°5 , Falampin Jérôme, unknown semi-pro vintage transformer (in tea box)

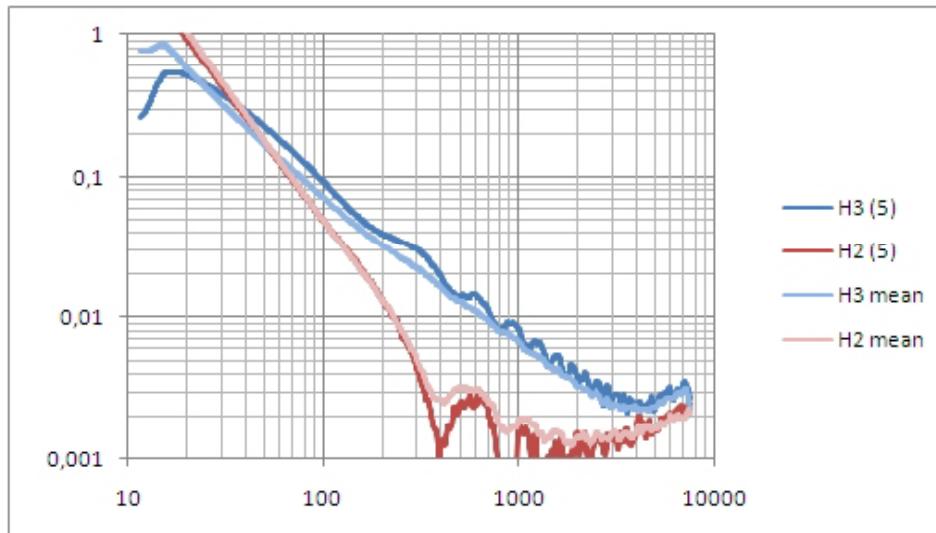

Frequency response (N°5 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
4,9	4,6	8,4	5,4	4,8	3,5	4,3	8,1	1,0	5,7

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

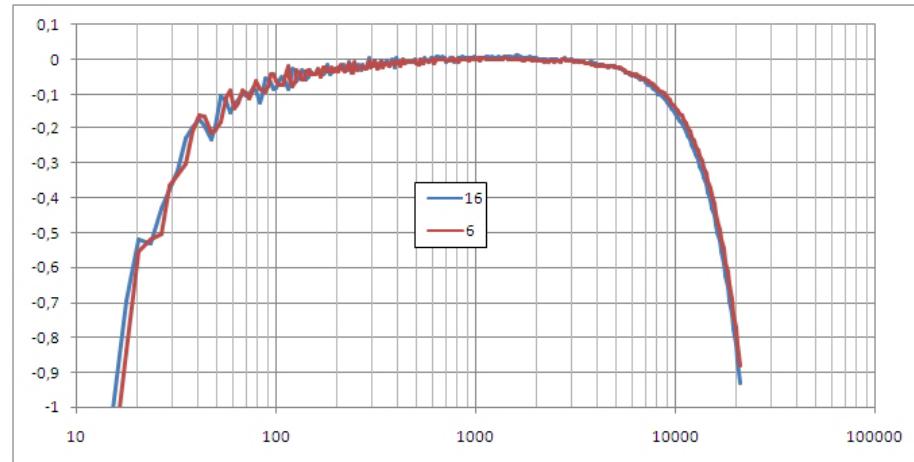

10kHz square wave

Transformer N°6 , Sullerot Julien, Partridge TK 4519

Frequency response (N°6 = red, blue = reference)

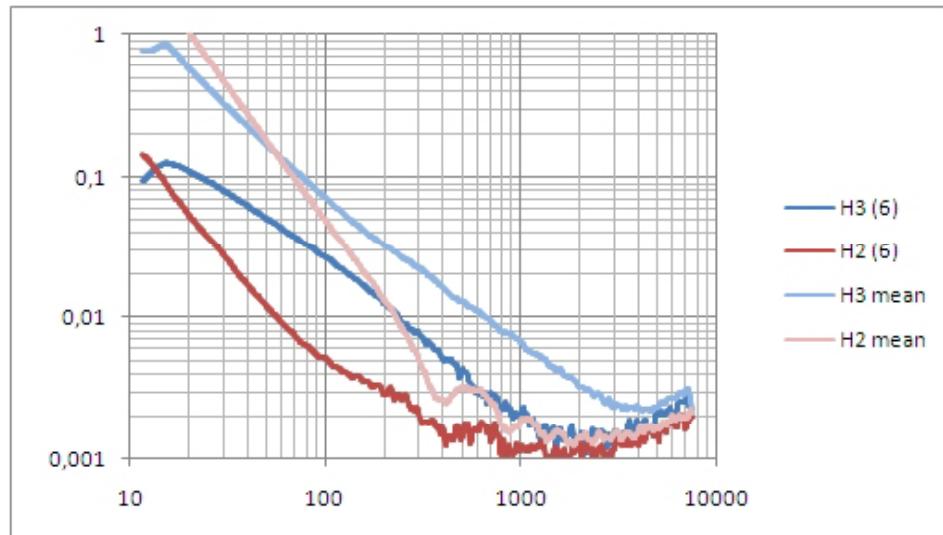

Scores: 0 = bad , 10 = excellent

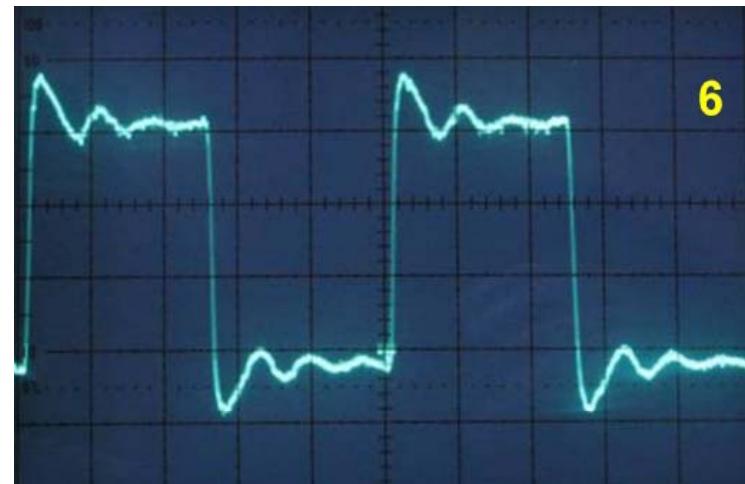

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,5	9,9	9,7	9,7	8,8	7,7	8,4	6,7	7,4	6,9

excellent frequency response.
low distortion .

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

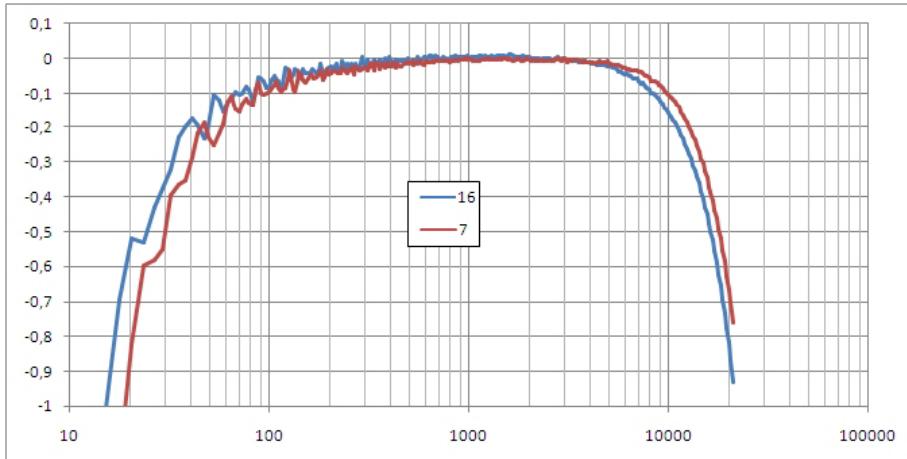

10kHz square wave

Transformer N°7 , van der Veen Menno , toroidal SE-OPT

Frequency response (N°7 = red, blue = reference)

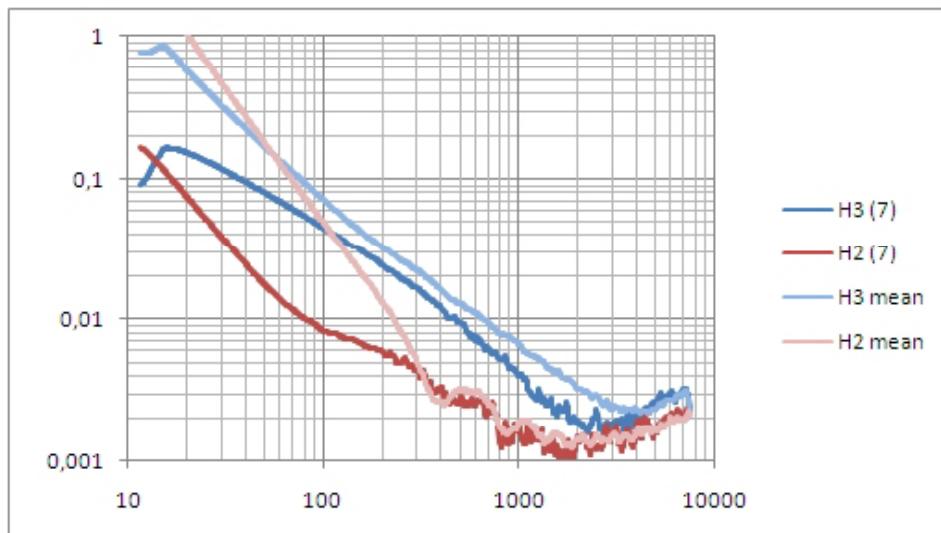

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,9	9,9	8,9	9,2	7,6	7,1	7,4			

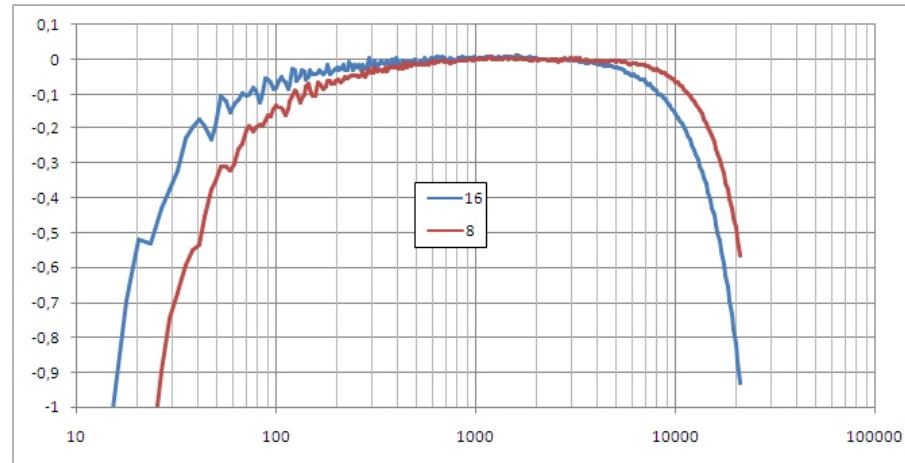

very good frequency response.

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°8 , Le Cléac'h Jean-Michel, Magnetics (special order)

Frequency response (N°8 = red, blue = reference)

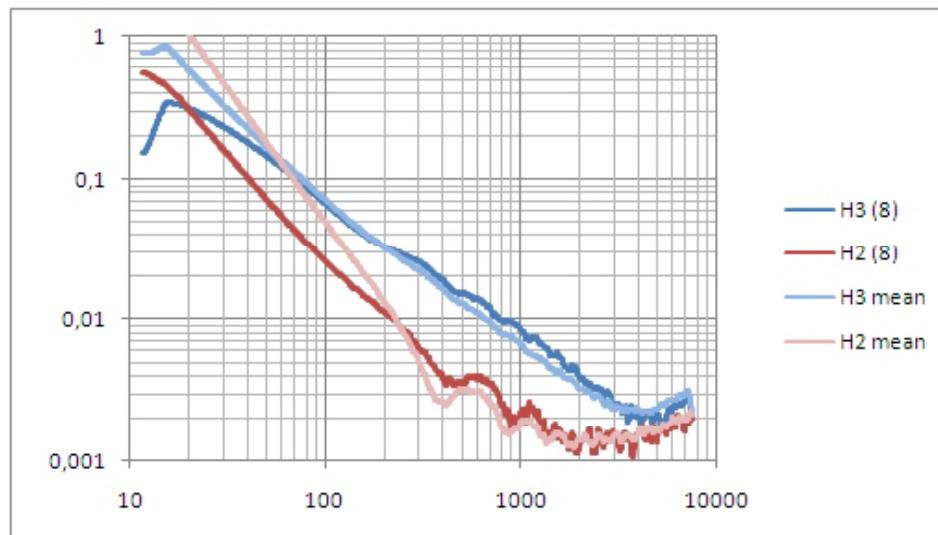

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,3	9,3	7,7	8,5	6,0	5,0	5,6	9,7	9,6	9,7

Excellent square wave response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

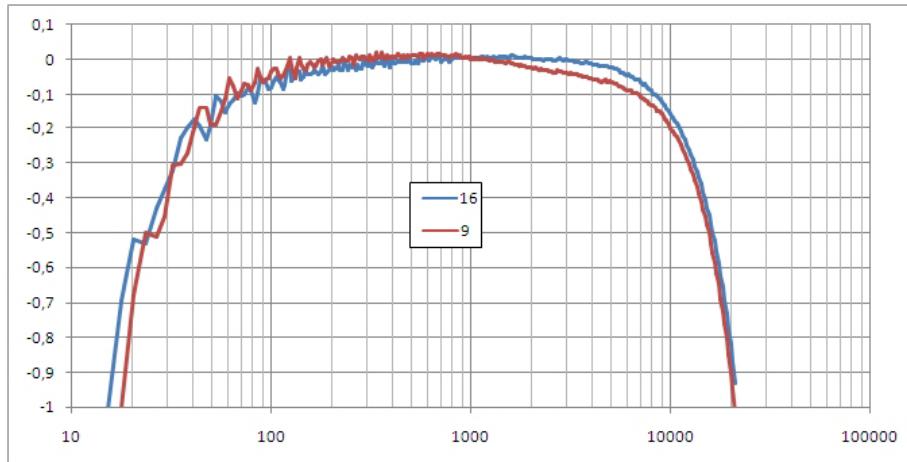

10kHz square wave

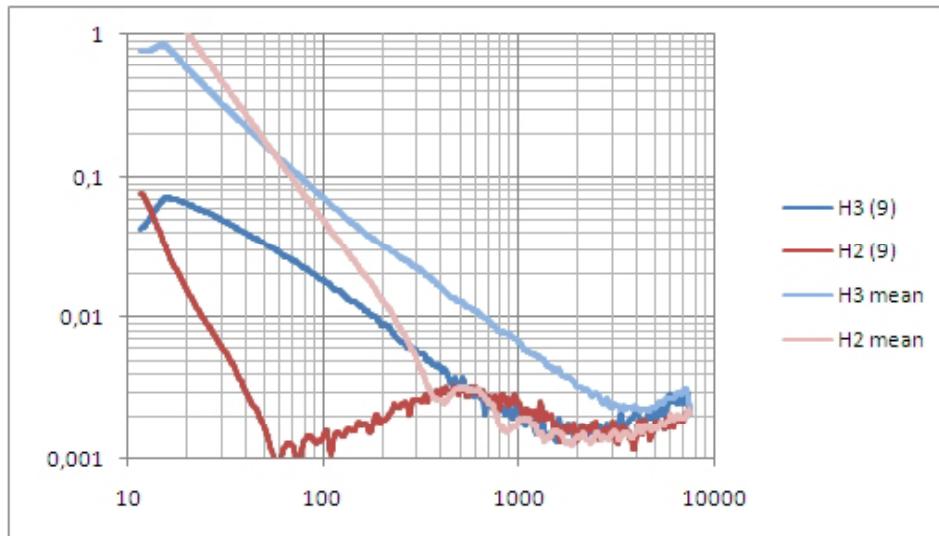

Transformer N°9 , Michimori Hirokuni , ex-Tango #10887 (special order), rating 50W, 3.5K

Frequency response (N°9 = red, blue = reference)

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

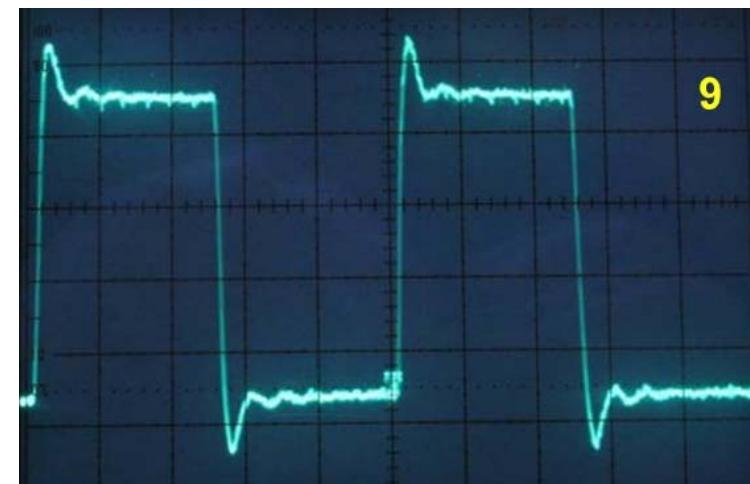

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,4	8,9	10	9,3	10	10	10	8,6	9,1	8,8

excellent frequency response.
best distortion performance.
good square wave response.

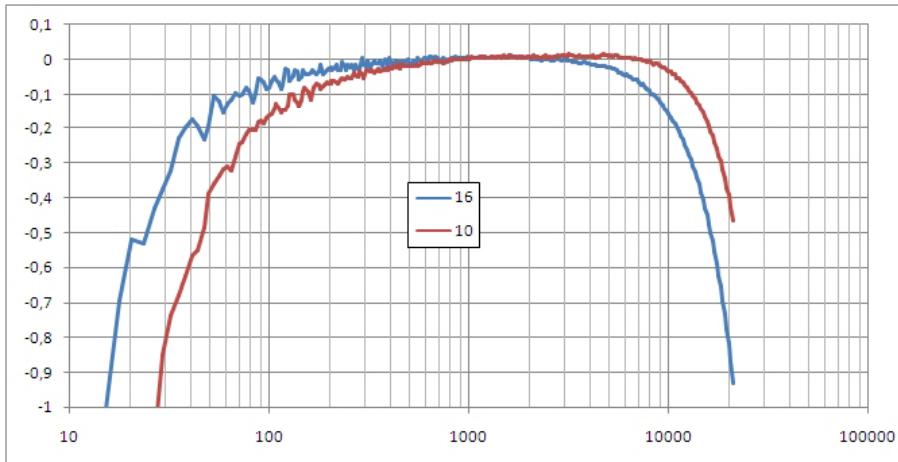

10kHz square wave

Compare with N°20

Transformer N°10 , Sullerot Julien, Tamura transformer from a Sun Audio 2A3 amp

Frequency response (N°10 = red, blue = reference)

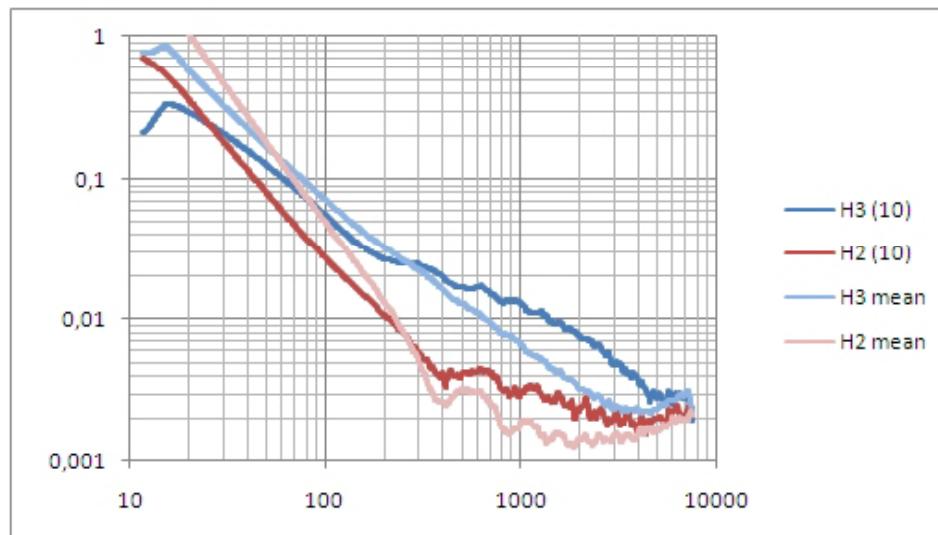

Scores: 0 = bad , 10 = excellent

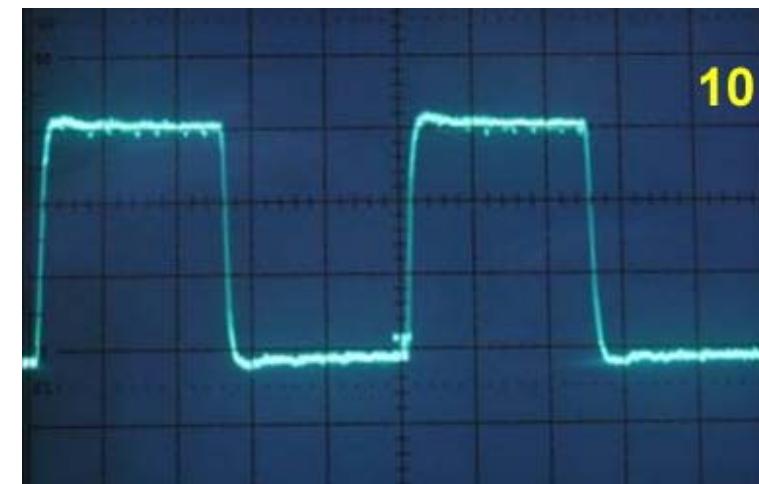

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,1	8,8	7,0	8,1	6,4	4,8	5,7	8,1	10,0	8,7

excellent square wave response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

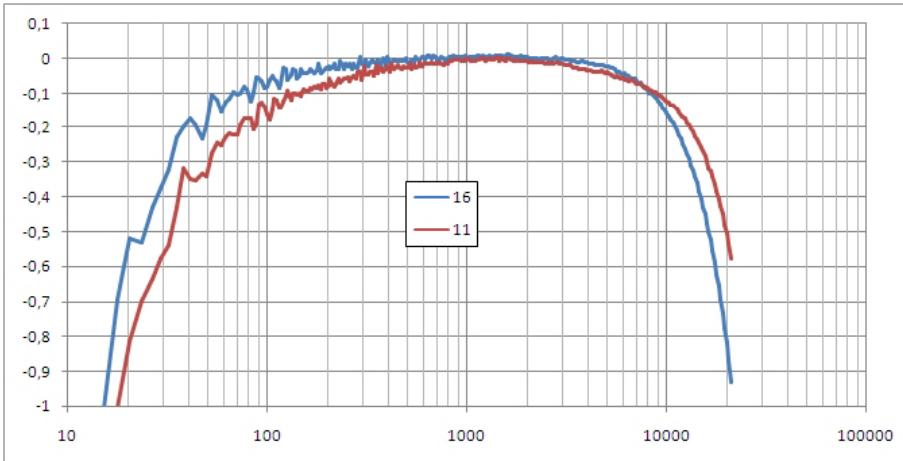

10kHz square wave

Transformer N°11 , Weidhase Ulf , One Parafeed Transformer 3k5 /8 Ohm

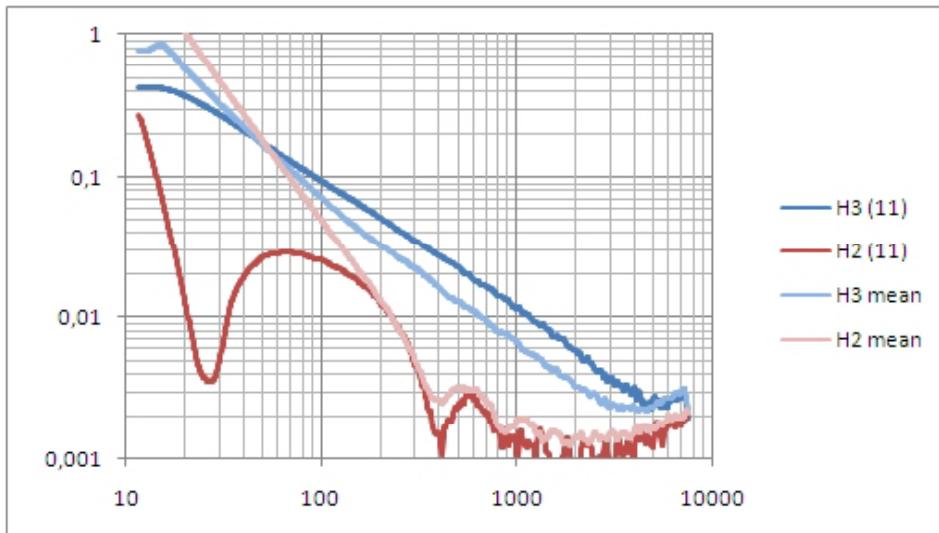

Frequency response (N°11 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

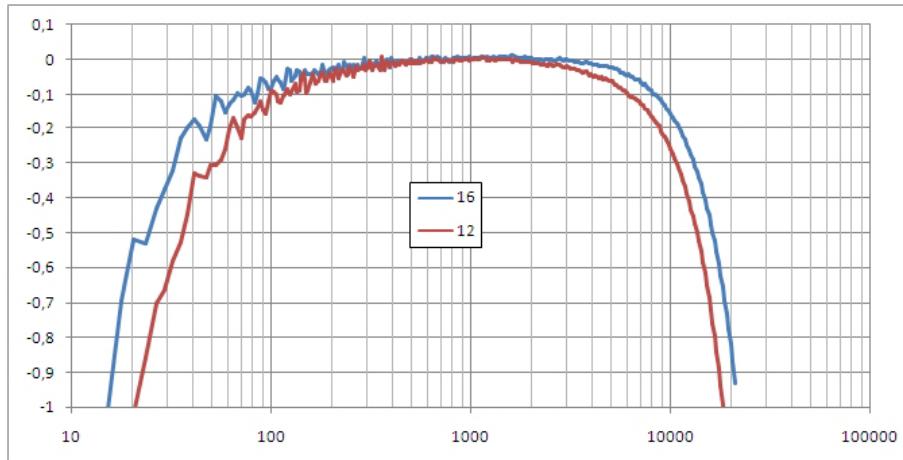

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,4	8,9	8,0	8,5	5,4	7,3	6,2			

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°12 , Le Cléac'h Jean-Michel, Meigxu from a Mingda SE amplifier

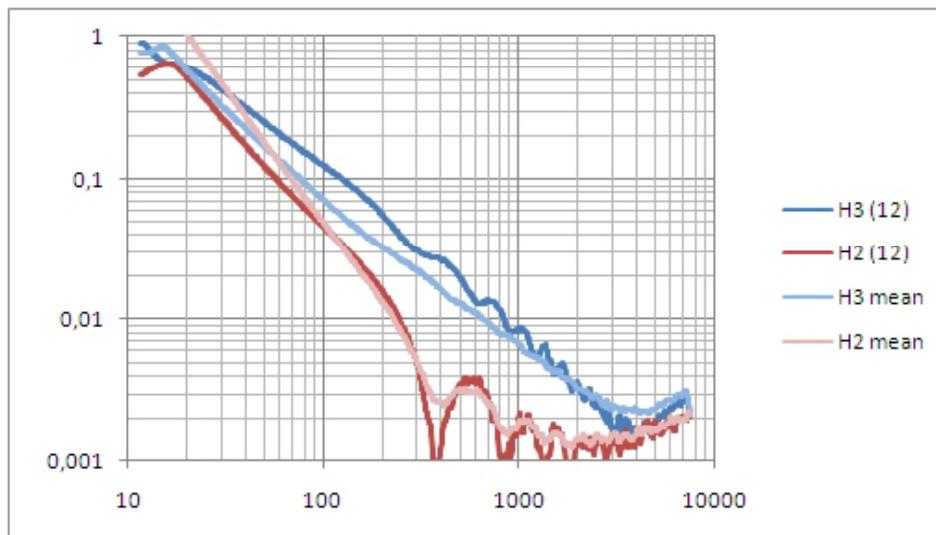

Frequency response (N°12 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
6,7	9,3	9,5	8,0	4,4	4,2	4,3	5,7	7,8	6,4

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

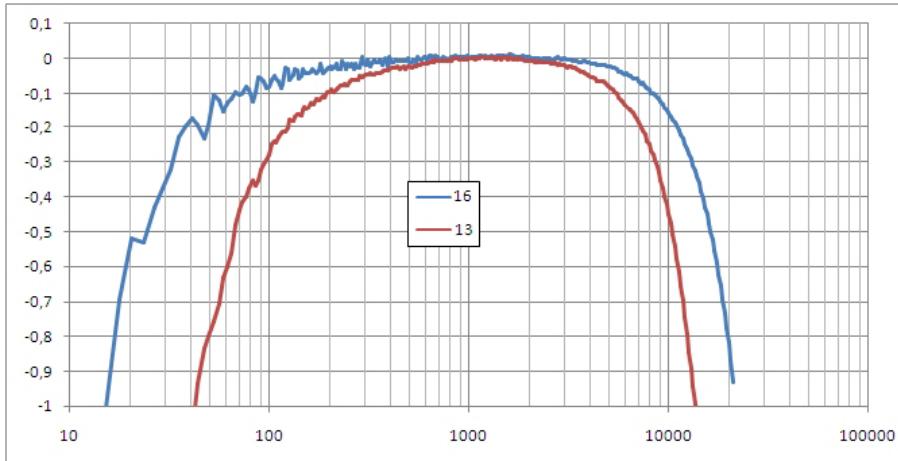

10kHz square wave

Transformer N°13 , Polisois Aristide, DIY grey large transformer

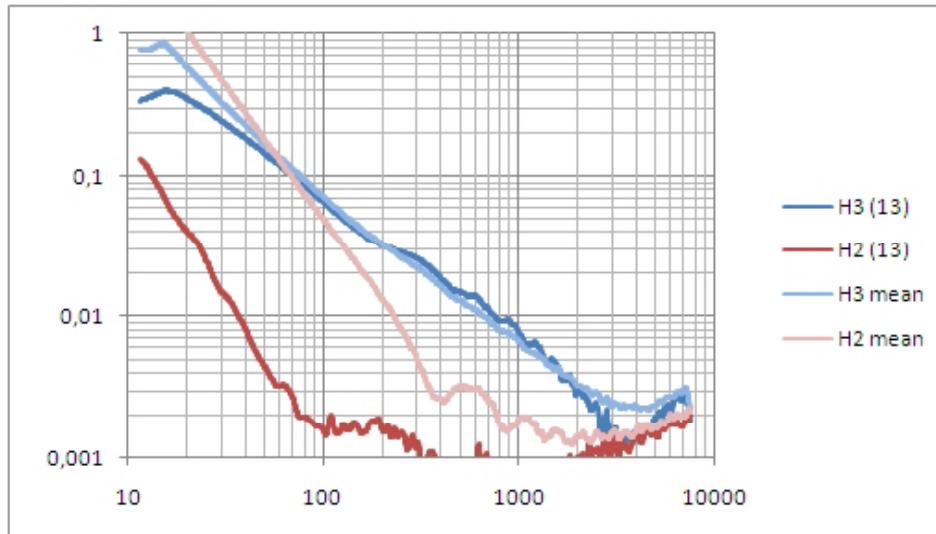

Frequency response (N°13 = red, blue = reference)

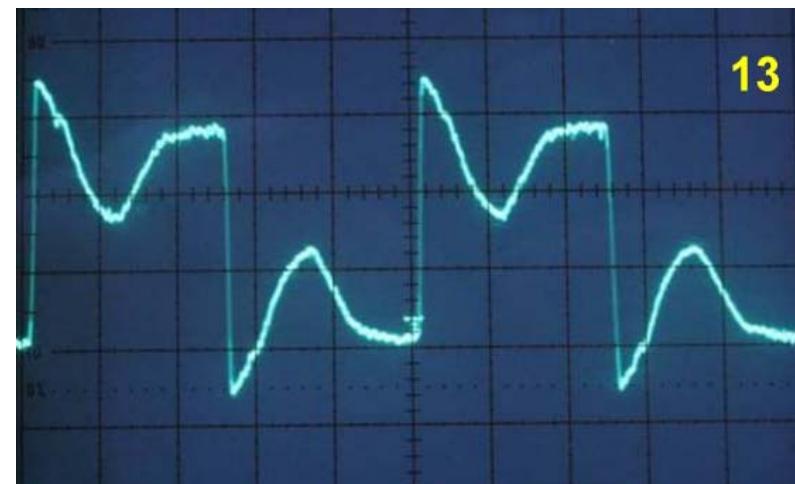

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
2,1	8,4	8,0	5,2	5,9	8,6	7,0	0,0	3,6	1,2

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

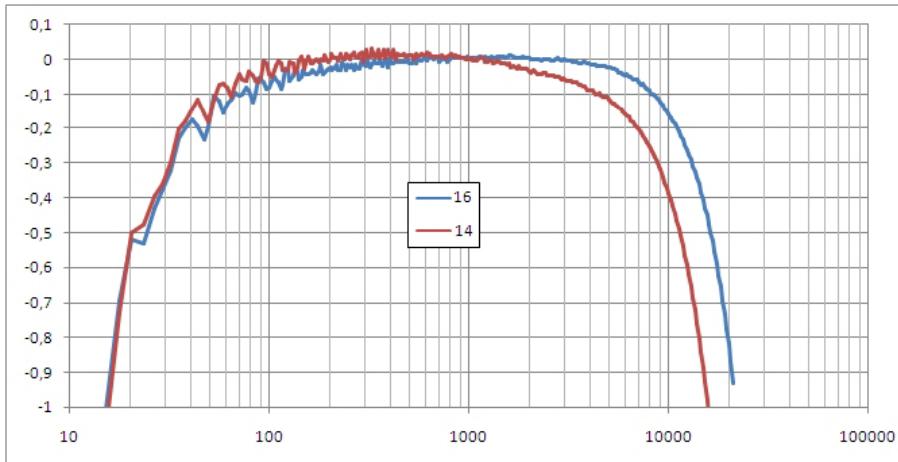

10kHz square wave

Transformer N°14 , Raudonat Ralf , yes, with output transformer regarding the terms

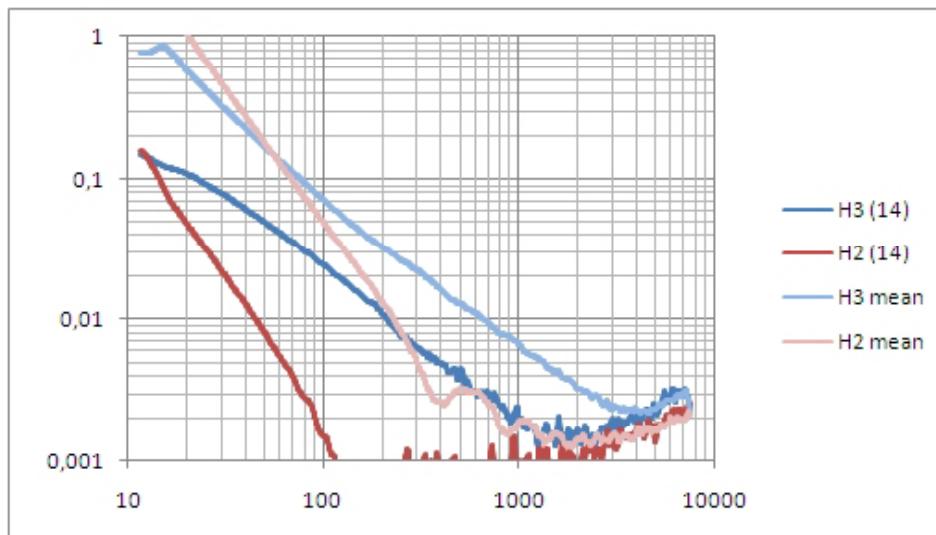

Frequency response (N°14 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
7,7	7,5	6,4	7,4	8,9	8,2	8,6	8,2	9,0	8,5

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

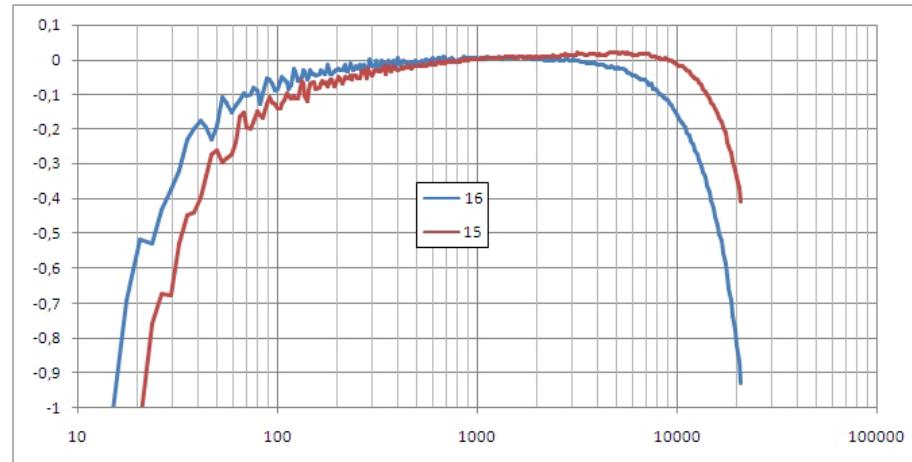

10kHz square wave

Transformer N°15 , Hasling Per & Ole, SE Silk transformer from Tailand 3,0 kOhm

Frequency response (N°15 = red, blue = reference)

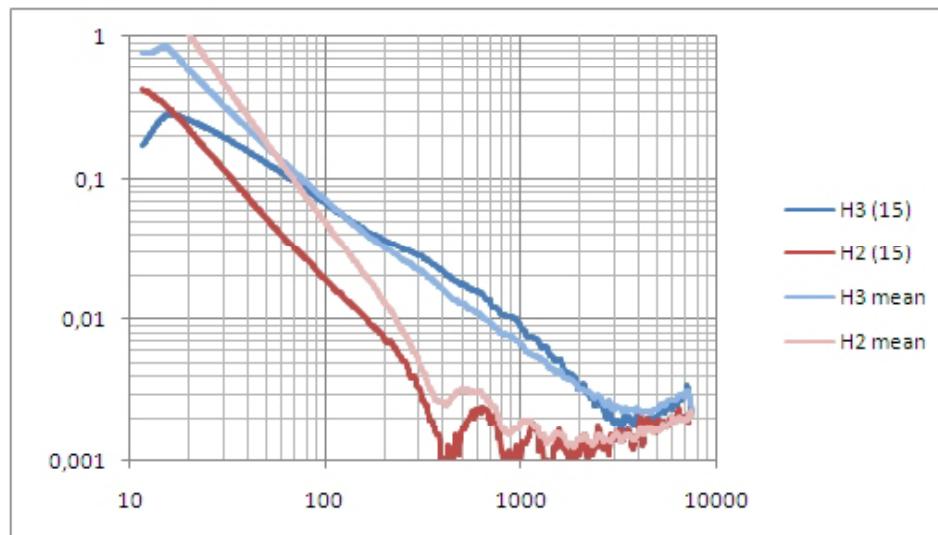

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
6,7	8,8	9,5	7,9	6,3	5,5	6,0	8,3	9,5	8,7

very good square wave response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

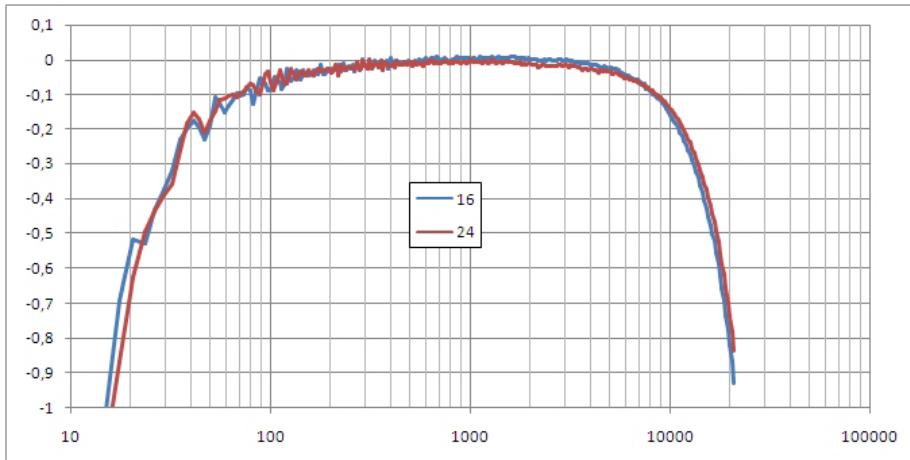

10kHz square wave

Transformer N°16 , Dolinskyi Arkadii, DIY EI transformer

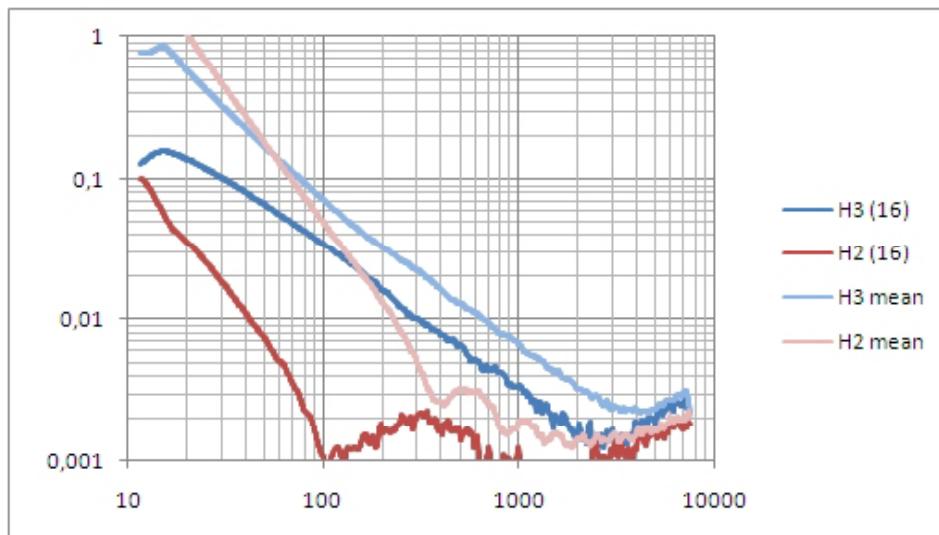

Frequency response (N°16 = blue = reference; 24 for comparison)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,4	9,9	9,9	9,7	8,1	8,5	8,3			

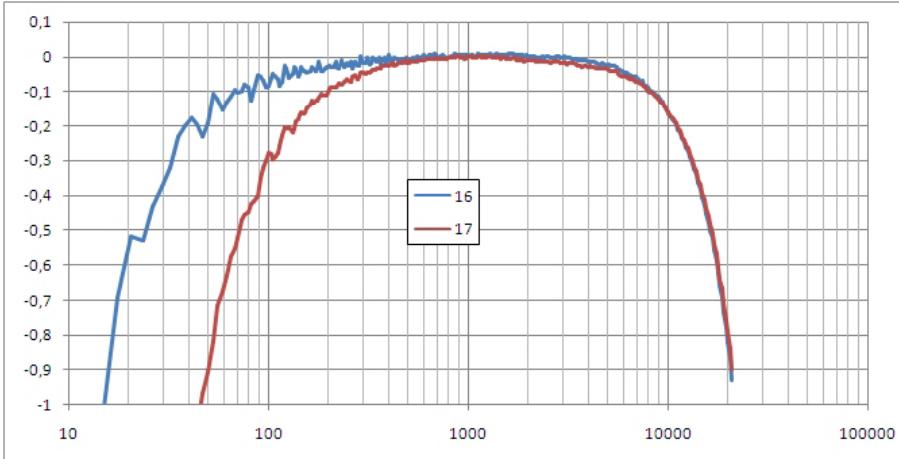

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

excellent frequency response.
low distortion .

Transformer N°17 , Weidhase Ulf , Transformer

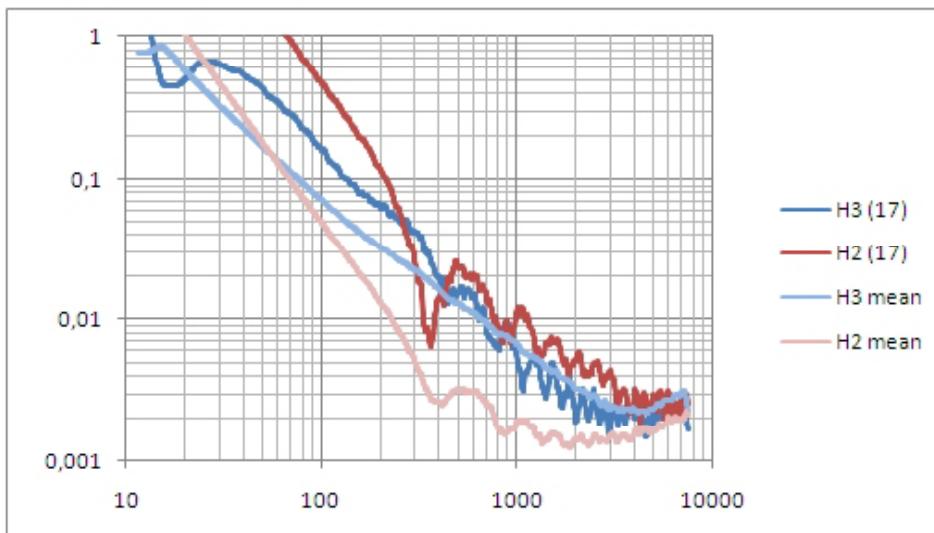

Frequency response (N°17 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

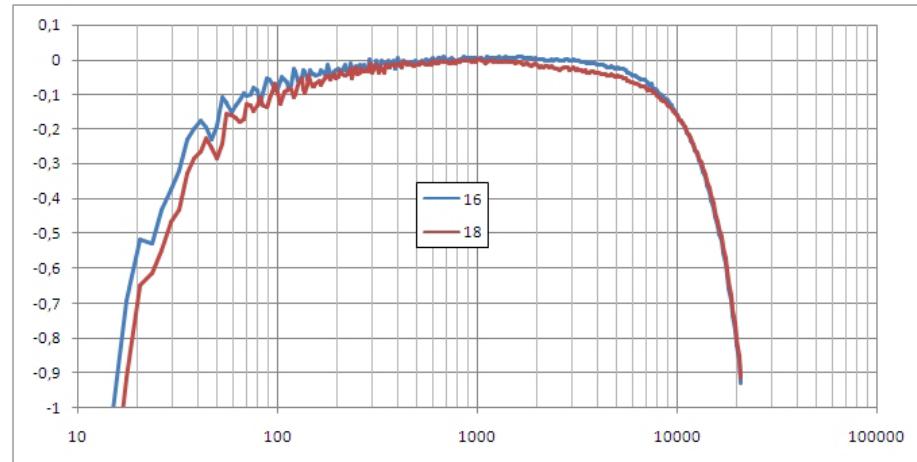

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
4,2	8,7	6,1	6,0	3,4	0,0	2,1			

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°18 , Schwarz Andreas, a selfmade single ended output transformer

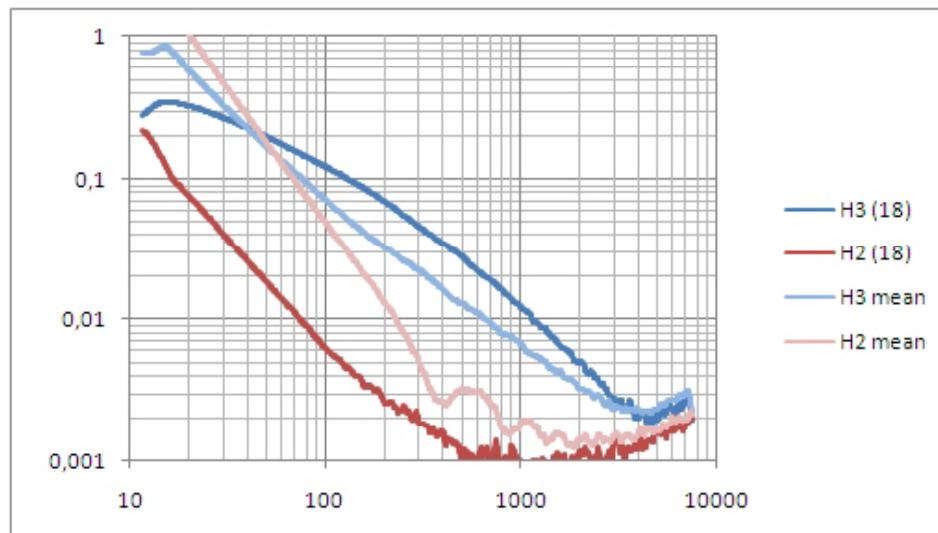

Frequency response (N°18 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,2	9,6	9,7	9,4	5,2	7,2	6,0			

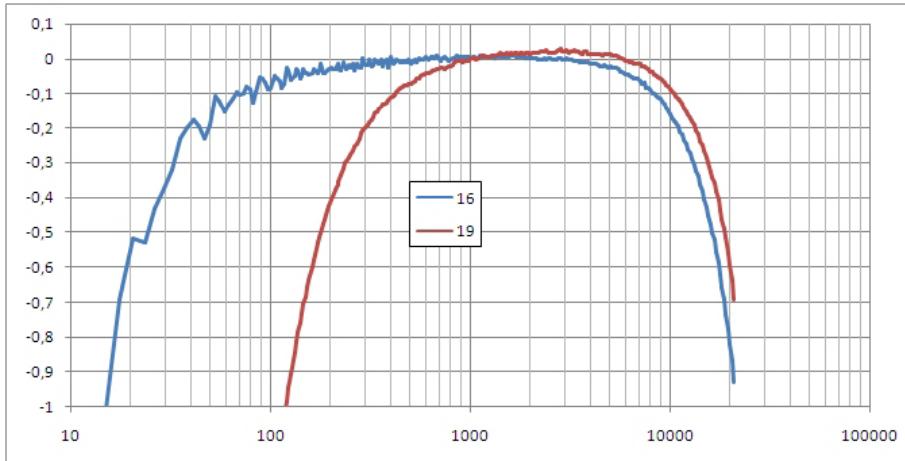

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

excellent frequency response.
Low H2 distortion .

Transformer N°19 , Polisois, Aristide, DIY toroid transformer

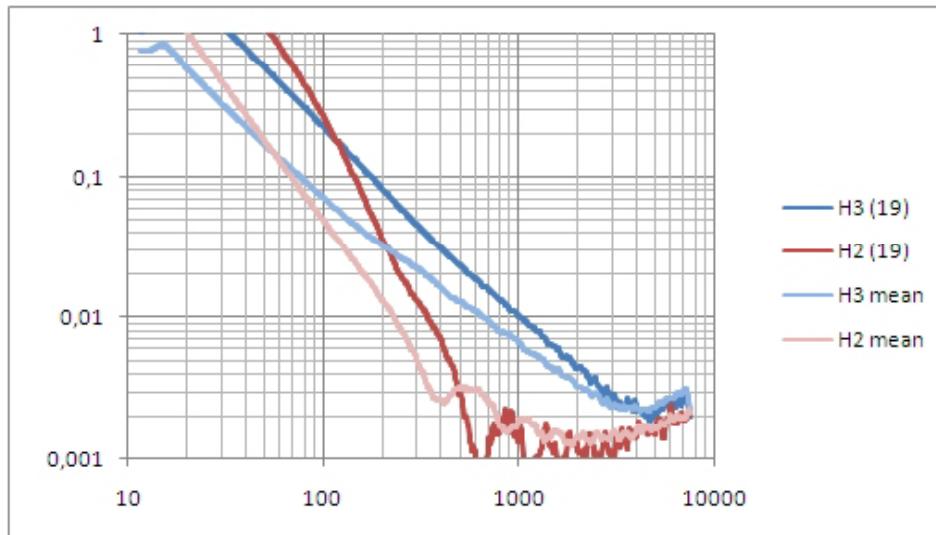

Frequency response (N°19 = red, blue = reference)

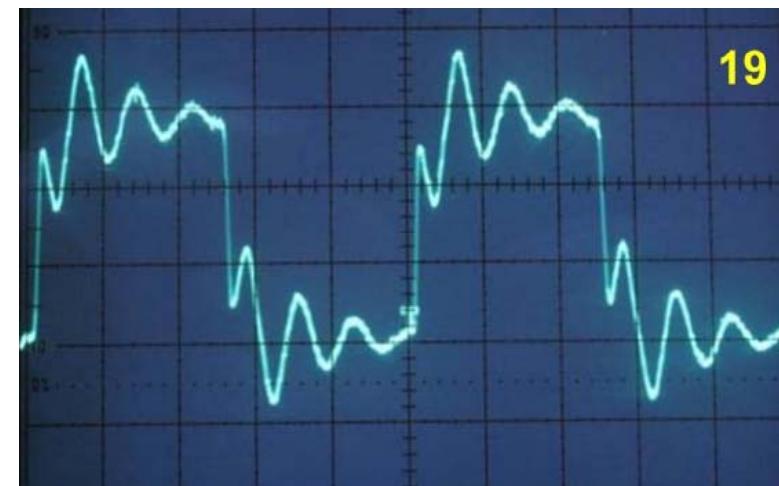

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
0,3	0,0	0,0	0,2	1,9	0,8	1,5	7,0	5,0	6,4

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

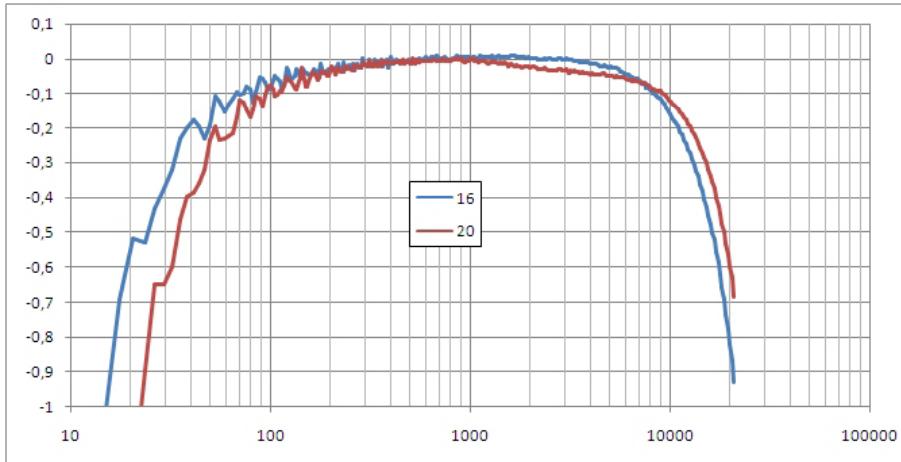

10kHz square wave

Transformer N°20 , Le Cléac'h Jean-Michel, Tango FX3.5

Frequency response (N°20 = red, blue = reference)

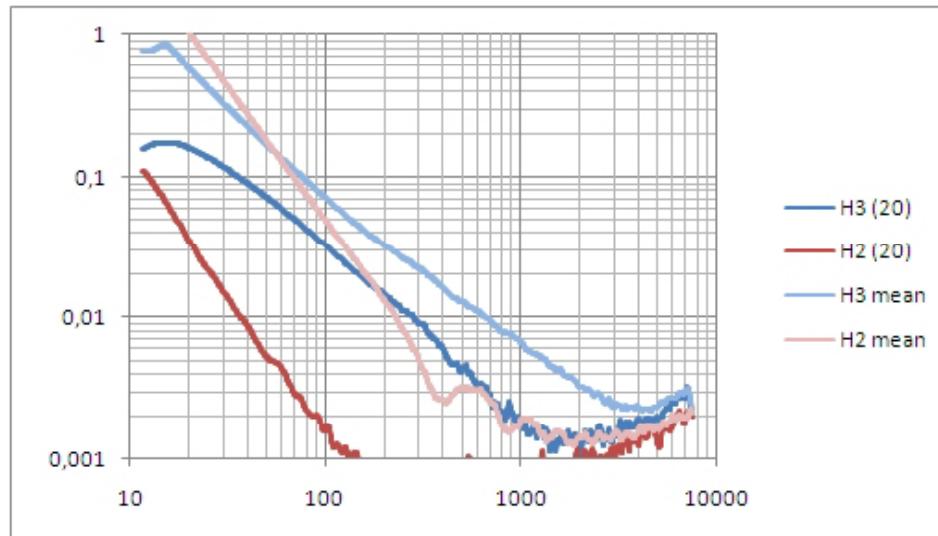

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,5	9,8	8,5	8,9	7,9	8,8	8,2	9,1	9,3	9,2

very good square wave response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

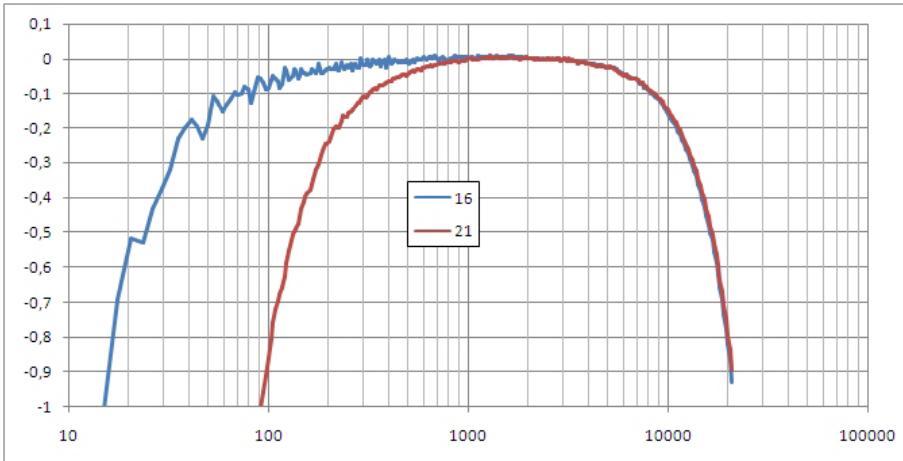

10kHz square wave

Compare with N°9

Transformer N°21 , Falampin Jérôme, DIY parafeed transformer

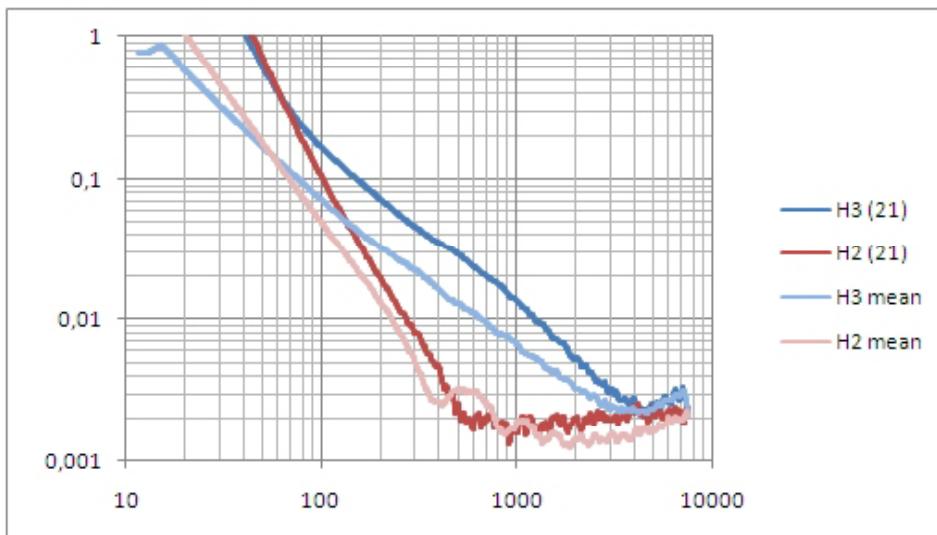

Frequency response (N°21 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

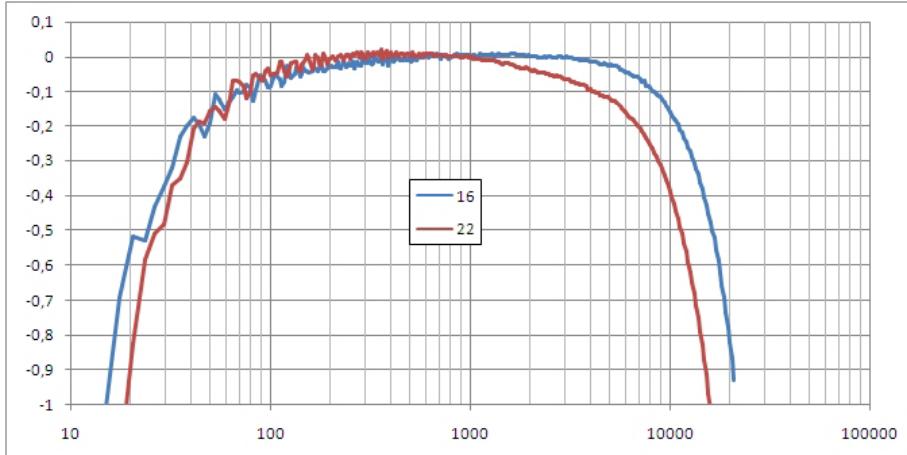

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
1,0	4,7	2,9	2,6	0,0	0,4	0,2			

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°22 , Weidhase Ulf, transformer

Frequency response (N°22 = red, blue = reference)

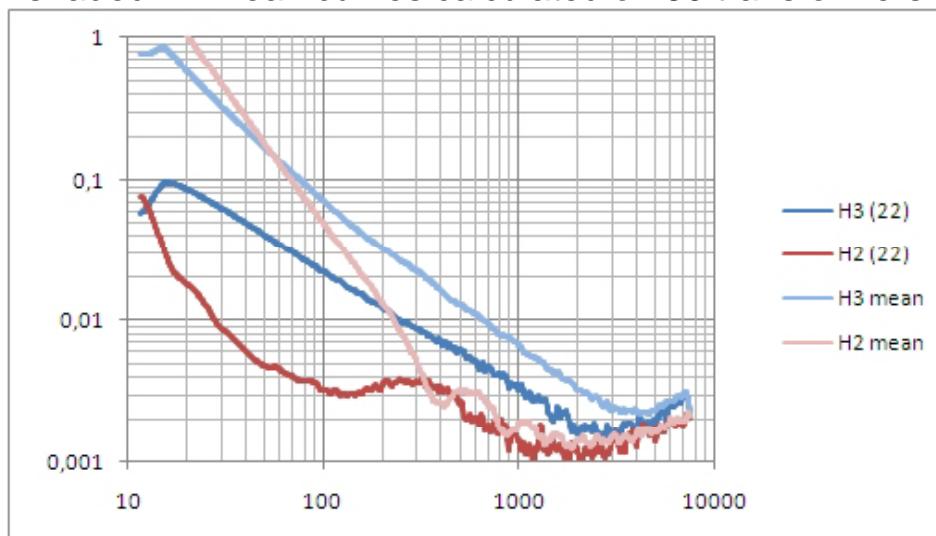

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
6,7	7,5	9,6	7,5	9,4	9,1	9,3			

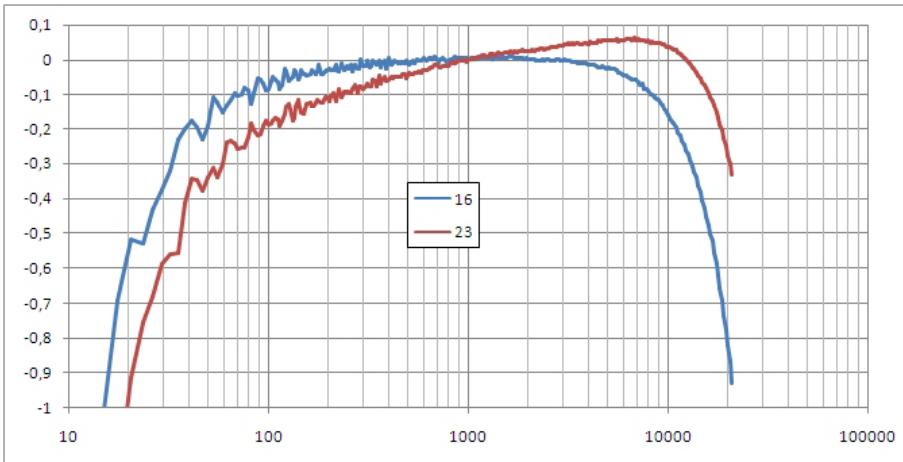

very low distortion

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°23 , van Willenswaard Peter, AudioNote Trans-300 double-C-core

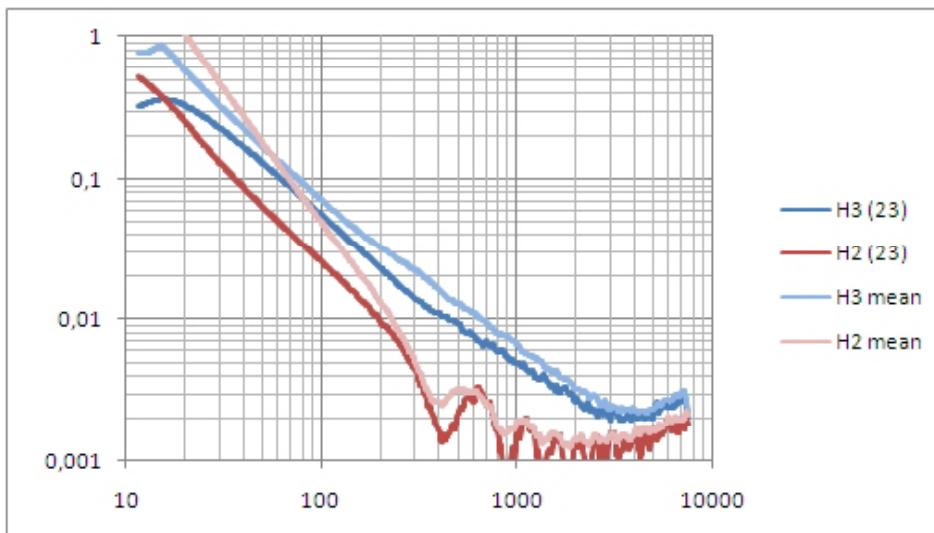

Frequency response (N°23 = red, blue = reference)

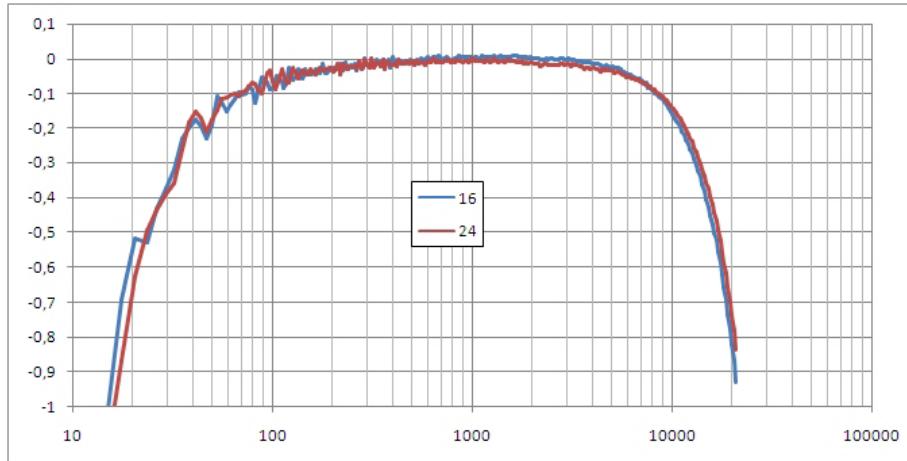

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,7	6,5	6,5	7,6	6,2	5,3	5,8			

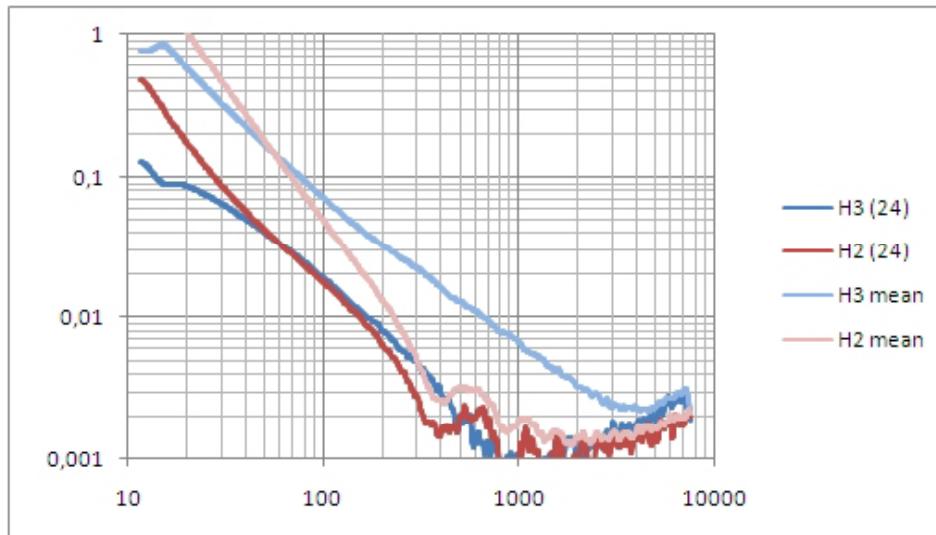

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Frequency response (N°24 = red, blue = reference)

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,5	9,9	9,6	9,6	9,5	5,9	8,0	10,0	9,7	9,9

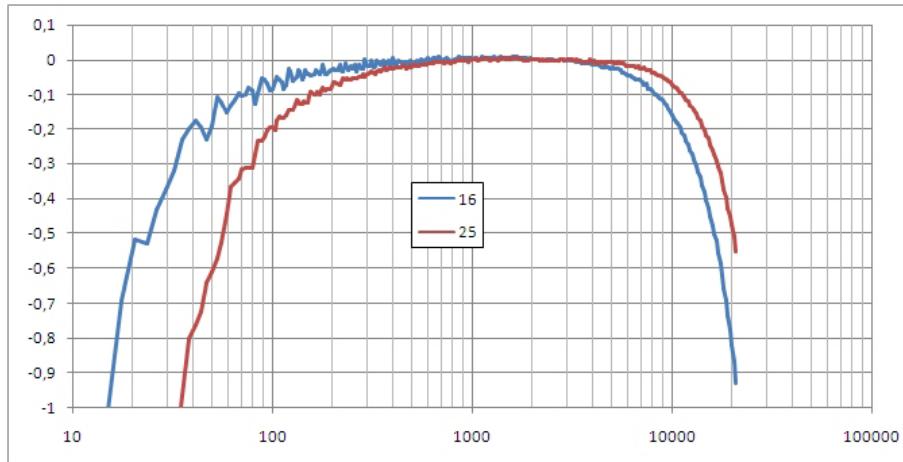

excellent frequency response.
low H3 distortion
excellent square wave response

10kHz square wave

Transformer N°25 , Le Cléac'h Jean-Michel, small and old Audionote

Frequency response (N°25 = red, blue = reference)

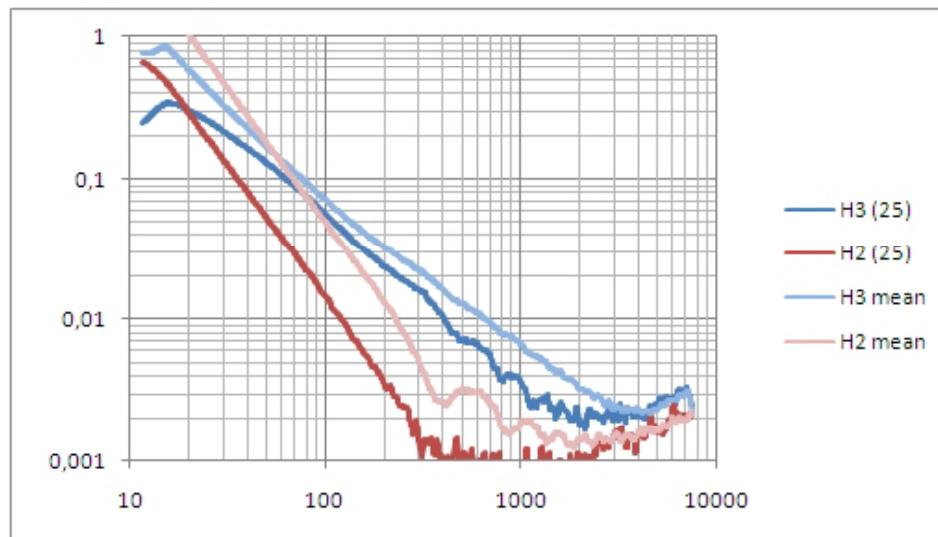

Scores: 0 = bad , 10 = excellent

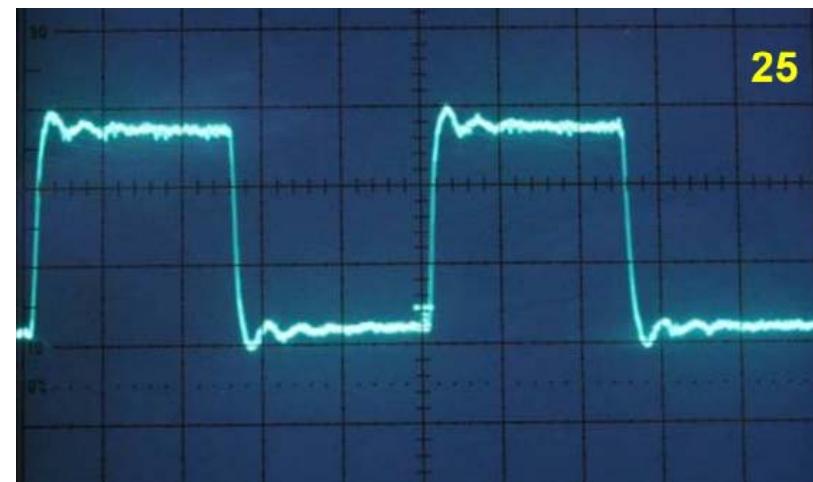

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
6,7	9,1	6,4	7,5	6,3	5,3	5,9	9,1	9,6	9,3

very good square wave response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

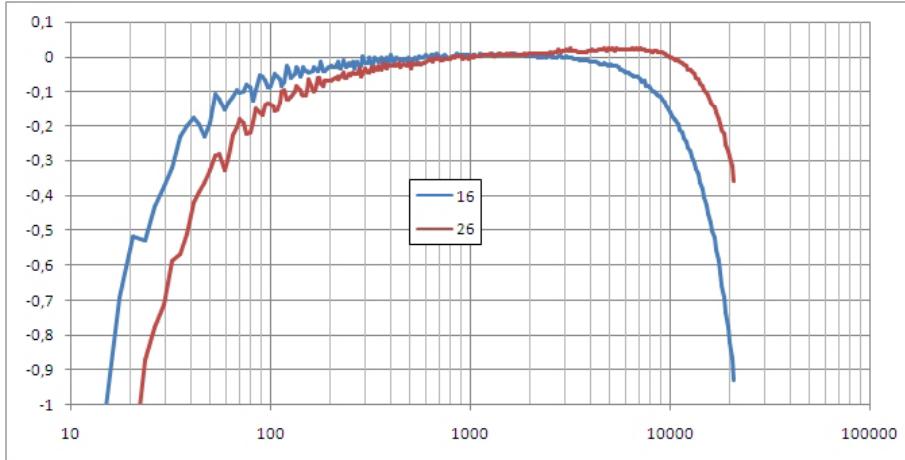

10kHz square wave

Transformer N°26 , Monmagnon Yves, Dissident Audio transformer

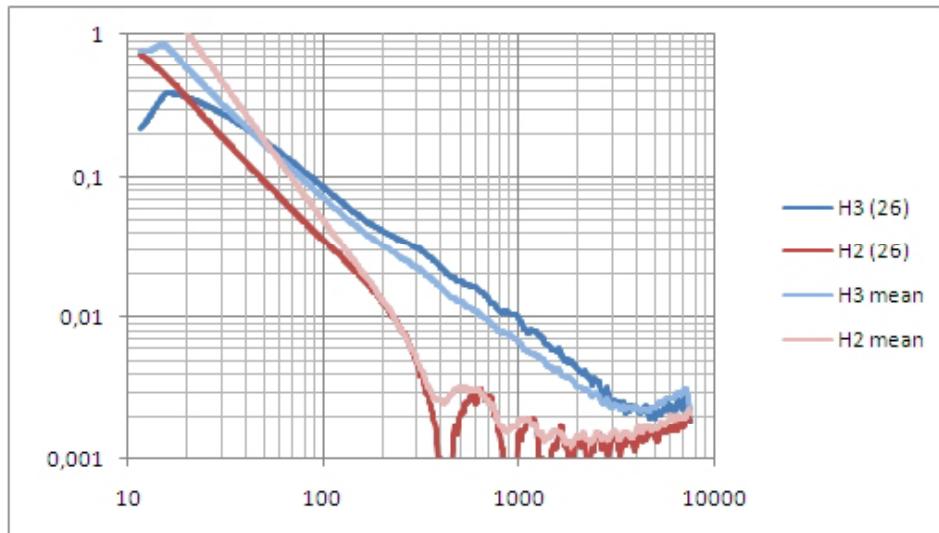

Frequency response (N°26 = red, blue = reference)

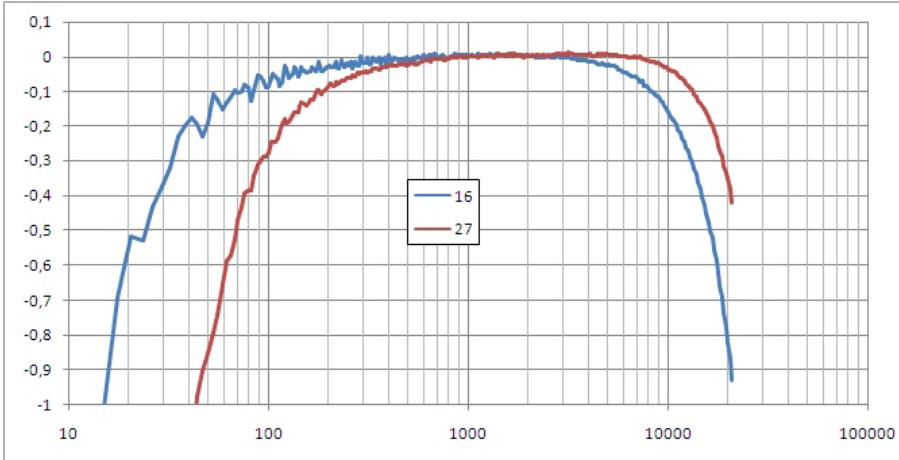

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,4	8,6	4,8	8,4	6,8	5,5	6,3			

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Frequency response (N°27 = red, blue = reference)

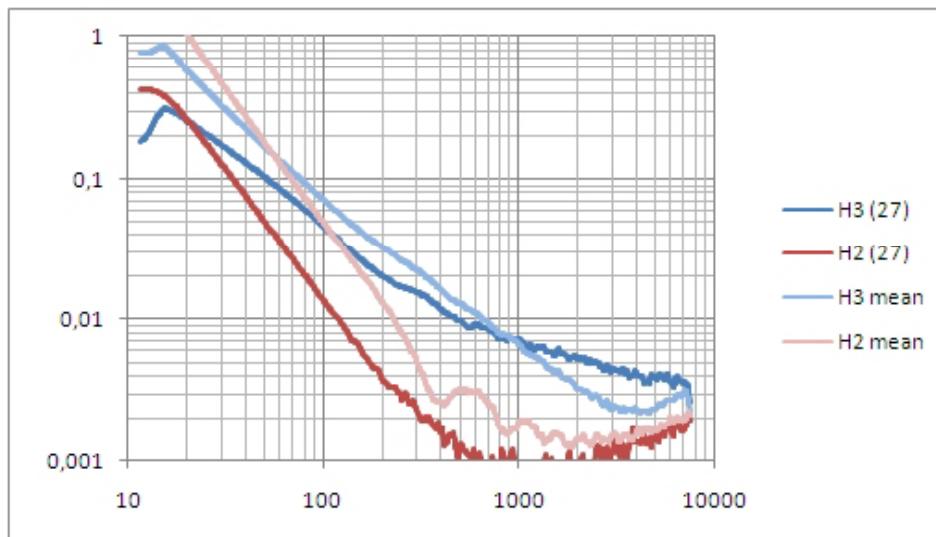

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
6,1	8,7	7,3	7,2	5,5	4,7	5,2	9,3	8,1	8,9

good square wave response

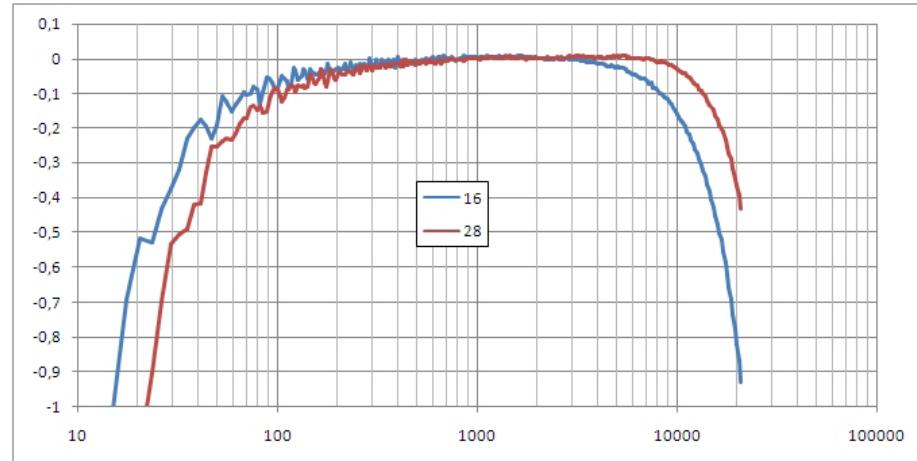

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

10kHz square wave

Frequency response (N°28 = red, blue = reference)

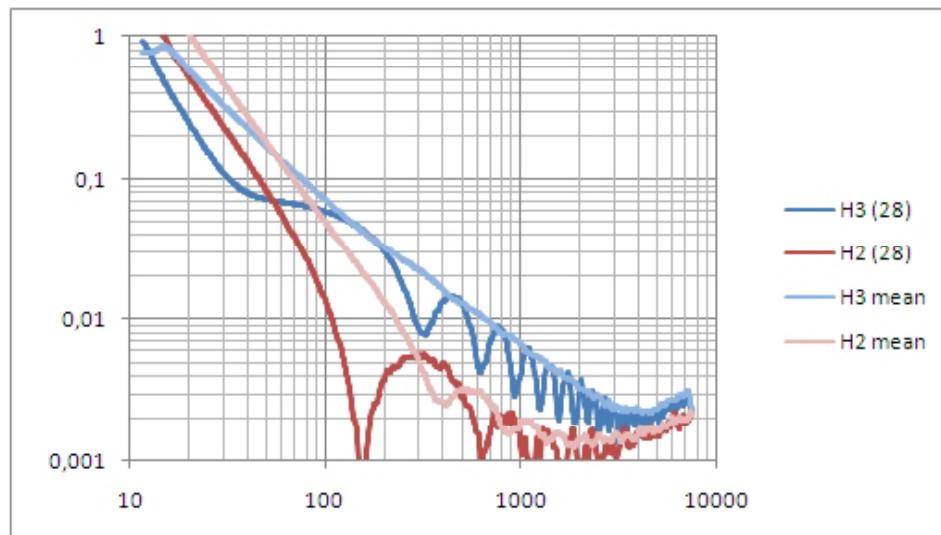

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
9,6	9,6	7,8	9,3	7,3	4,6	6,2			

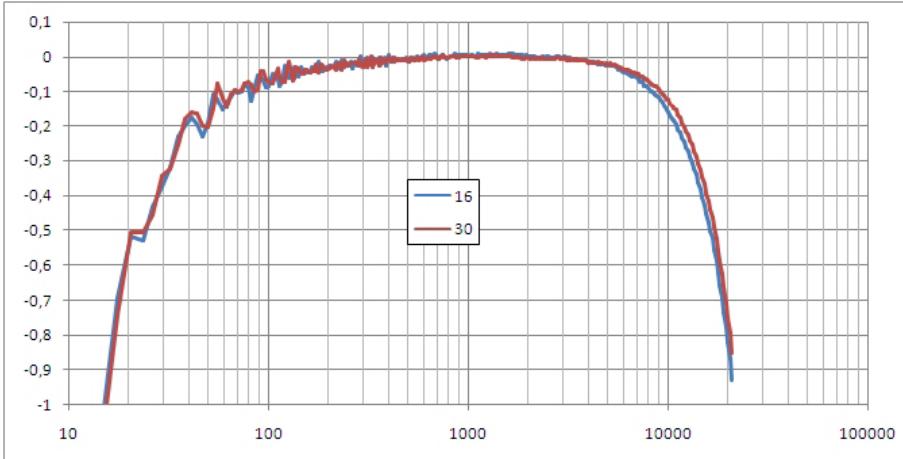

good frequency response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

Transformer N°30 , Lundahl Per, LL1693/70mA

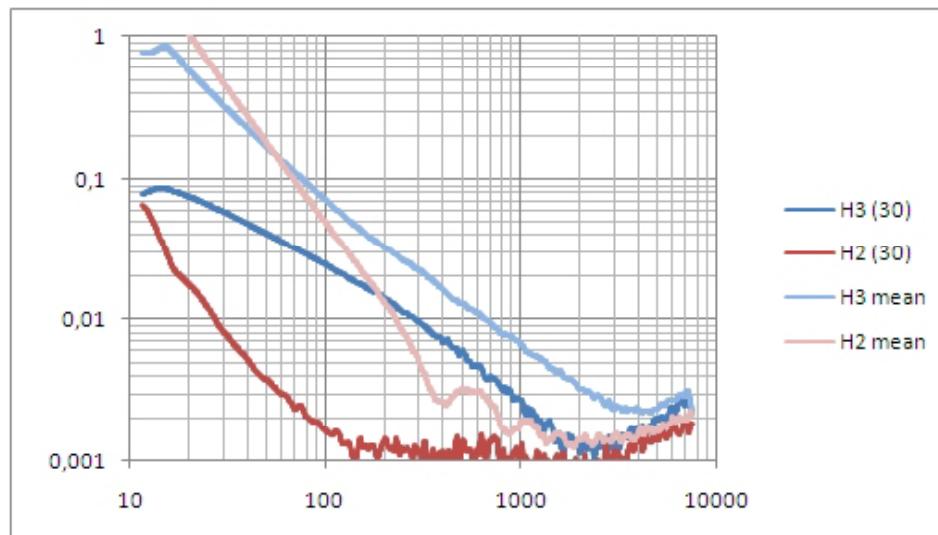

Frequency response (N°30 = red, blue = reference)

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
10,0	10,0	9,8	10,0	9,4	9,5	9,5			

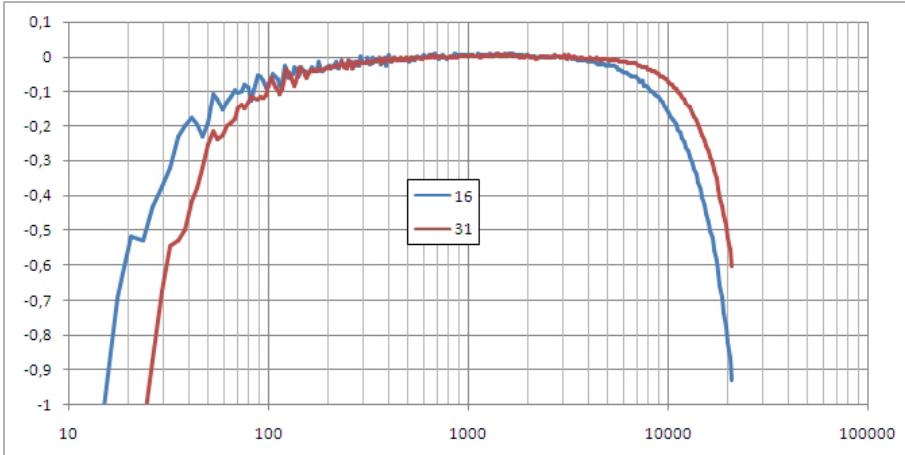

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers

The best frequency response.
Very low distortion .

Transformer N°31 , Lundahl Per, LL1664AM/70mA

Frequency response (N°31 = red, blue = reference)

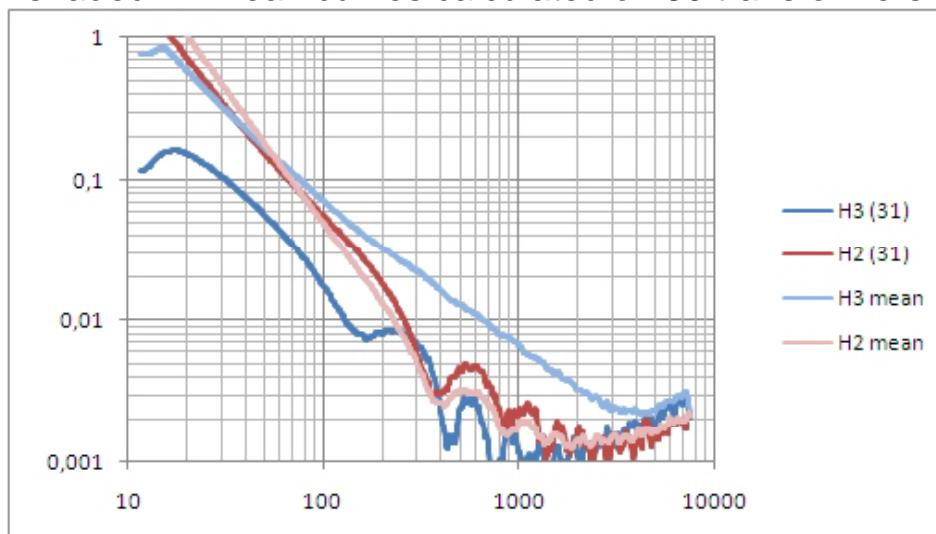

Scores: 0 = bad , 10 = excellent

frequency response				distortion			10kHz square wave		
width	flatness	symmetry	weighted	H3	H2	weighted	HF resonance	overshoot	weighted
8,7	10,0	8,1	9,0	8,5	3,8	6,6			

good frequency response

Distortion (red = H2, blue = H3)
shaded = mean curves calculated on 30 transformers
